MADELEIN TRAN, MBA, BS

BUSINESS INTELLIGENCE DEVELOPER | BI, AI/ML & WORKFLOW AUTOMATION | NATURAL GAS & ENERGY

Pearland, TX | madeleinhtran@gmail.com | (337) 349-7560 | linkedin.com/in/madeleintran/

SUMMARY

Business Intelligence developer with 6+ years of experience delivering **operational, commercial, and financial BI**, **business process and workflow automation**, and **predictive analytics** solutions using **AI/ML** technologies, now supporting a natural gas energy company. Advanced expertise in **SQL, Power BI, DAX, SSRS, SSIS, Excel, and Python**, with a proven ability to write, analyze, and maintain complex scripts and rapidly learn new platforms such as **Palantir Foundry** and Databricks. Translates business requirements into technical specifications for reporting, system interfaces, bolt-on applications, data aggregation and transformations, and enterprise data modeling. Works independently on complex assignments in deadline-driven environments while partnering with business, IT, and DBA teams, following IT standards, change management procedures, and security policies.

WORK EXPERIENCE

Williams Companies (Natural Gas)

Business Process Analyst III - Supply Chain / Procurement & Project Solutions | *June 2026 - Present*

- **Gather, interpret, and translate business requirements into technical specifications** for enterprise BI, reporting, data aggregation and transformations, and enterprise data modeling across Oracle, Databricks, SQL, and Power BI for a natural gas business.
- Architected enterprise **MRP delivery-date visibility** data into an easy-to-use **operational Power BI dashboard** in **3 business days from request to production**, linking part-number and free-text POs to work orders with Planner, Work Order, Turnaround (TAR), and Open Requisition views so operations could see shortages, late dates, and requisition aging, expedite material, and protect outage readiness.
- Built logistics **reporting and search tools** that identified **$160M+ in tax and tariff spend** (2021-2026), about **11x more** than taxonomy-based reporting captured ($14.6M), by applying SQL text search across invoice descriptions and task-level tagging; delivered tariff strategy and **actionable cost-savings opportunities** to leadership and **saved the Logistics Category Manager up to 20 hours per week**.
- Identified **$2B+ in 2026 spend affected by gaps in FP&A and IT system integration structures**, turning findings into actionable data corrections and building **vendor and buyer audit tools** that promote **strategic procurement sourcing** and strengthen Financial Planning accuracy.
- Architected a **financial and commercial spend analytics** foundation spanning Oracle, Databricks, Accounts Payable, PO/WPO, project, vendor, category, and supplier data to improve traceability and strategic decision support.
- **Troubleshot and resolved complex technical and business process issues** by reconciling discrepancies across AP/invoice, PO, Project Hub, and production Supply Chain reporting, delivering a source-traceable approach with minimal disruption to business operations.
- Wrote, analyzed, and maintained **complex SQL (CTEs, stored logic), DAX, and Python** to define actual, committed, projected, and budget spend logic, including Goods vs. Services, CapEx vs. OpEx, and Base Business vs. Power Generation classifications.
- Identified governance gaps across semantic models, embedded DAX, report ownership, lineage, QA/QC, environment management, and **change control**; authored **documentation**, data-dictionary, and report-catalog standards aligned to **IT standards and security policies**.
- Built a framework to inventory Power BI reports, semantic models, calculations, sources, owners, and dependencies, reducing duplicate logic and **optimizing system performance** through a governed enterprise source of truth.
- Built a Databricks notebook and **Genie AI** proof of concept for conversational, **AI/ML-enabled predictive analytics**, capturing requirements for scalable enterprise AI use cases in collaboration with IT AI/BI and data teams.
- Designed the architecture concept for manufacturer-distributor-item relationships and Oracle Item Master standardization, a **process improvement and cost reduction** initiative reducing generic '.X' catch-all classifications.
- Partner with Procurement, Category Management, Supply Chain, Finance/AP, Financial Planning, Risk, IT/Data, DBAs, and Infrastructure groups, providing **clear communication and updates to management and stakeholders** and converting complex concepts into governed solutions.
- Developed analytics supporting approximately 10 Category Managers, increasing confidence in spend analysis used for supplier, category, sourcing, and contract/agreement strategy.

YesCare

Senior Power BI Developer | *July 2024 - April 2026*

- Led design and delivery of enterprise Power BI solutions supporting **operational, financial, and executive BI** across utilization management, labor, claims, and pharmacy for multiple contracts, working independently on complex assignments.
- Supported and enhanced existing **SSRS / paginated RDL reports** with dynamic parameters for multi-client reporting and automated distribution.
- Architected scalable semantic and **enterprise data models** and advanced DAX measures (rolling 12/13-month trends, ALOS, variance analysis) across financial, clinical, operational, and workforce datasets.
- Wrote complex SQL queries and stored procedures and built **SSIS-style ETL** data aggregation and transformation pipelines to extract, transform, and validate data across multiple source systems.
- Delivered **business process and workflow automation** with Power Automate, and a **bolt-on Power Apps application** integrating SharePoint lists with SQL Server through system interfaces, reducing manual effort and improving data accessibility.
- Built Python and Excel-based **predictive and trend analytics** to forecast admissions and utilization, enabling cost reduction decisions.
- Partnered with Director- and VP-level stakeholders to translate requirements into executive-ready analytics, applying UX/UI, row-level security, and change management best practices.

Invenio Technologies (Contract)

Analytics Engineer | *January 2025 - 2026*

- Delivered **commercial and operational BI** for Oil & Gas EPC and energy/industrial operations supporting project performance, supply chain visibility, labor cost, business development bid strategy, and resource allocation.
- Integrated multi-source project, procurement, financial, and workforce data into centralized Power BI models; data-driven bid insights improved cost estimation accuracy and operational forecasting.

Completeful (Contract)

Power BI Developer | *September 2022 - January 2023*

- Developed real-time operational, financial, inventory, order, shipment, and fulfillment dashboards using Power BI, SQL, and Excel to surface risk and process improvement opportunities.

Tides Medical | LOFT

Power BI Developer | *Donor Coordinator / Acquisition Technician* | *July 2020 - September 2022*

- Built real-time management analytics that **reduced errors by 10%** while production/acquisition **increased by 150%**; automated internal and client reporting and initiated a Power Apps/Power Automate workflow application.
- Maintained strict adherence to SOPs, regulatory compliance, and **safety** standards; helped revise SOPs to updated AATB guidelines.

Earlier Experience

LaHaye Total Eye Clinic - Ophthalmic Technician/Scribe | Crown BioScience - Clinical Research Associate | Ochsner Lafayette General Hospital - Nurse Technician | Walgreens - Pharmacy Technician

TECHNICAL SKILLS & CORE EXPERTISE

BI & Reporting: Power BI, SSRS, Power BI Report Builder/RDL (Paginated Reports), Excel (Advanced, Power Query, Pivot), DAX, Power Query M, Tableau, Deneb, Vega-Lite, Dashboard Design, UI/UX.

Data Engineering & Integration: SQL (T-SQL, CTEs, Stored Procedures), SSIS, ETL, Data Aggregation & Transformation, Enterprise Data Modeling, Semantic Modeling, System Interfaces, Data Validation.

AI/ML & Predictive Analytics: Python, Predictive Analytics, Machine Learning, Azure ML, Databricks, Databricks Genie, AI-enabled Analytics, Palantir Foundry.

Automation & Applications: Business Process / Workflow Automation, Power Automate, Power Apps (Bolt-on Applications), SharePoint, Microsoft Lists, Office Scripts, VBA.

Databases & Tools: SQL Server, SSMS, Oracle / Oracle Fusion, PostgreSQL, MySQL, DBeaver, Visual Studio Code, JavaScript, JSON.

Governance & Delivery: Requirements Gathering & Technical Specifications, Documentation, IT Standards, Security Policies, Change Management, QA/QC, Data Lineage, Troubleshooting, System Optimization.

Energy / Domain: Natural Gas, Midstream, Commercial, Contract Administration, Nominations/Scheduling, Gas Control, Financial Planning & Analysis (FP&A), Risk Management, Supply Chain, Logistics, Tax & Tariff Analytics, MRP & Material Planning, Work Orders, Turnaround (TAR) Readiness, Procurement, Accounts Payable, Cost Analysis.

Professional: Cross-functional Collaboration, Written & Verbal Communication, Independent Work, Prioritization in Deadline-driven Environments, Continuous Learning & Knowledge Sharing.

EDUCATION

University of Louisiana at Lafayette - Master of Business Administration, 2022 | GPA: 3.81 | Magna Cum Laude

University of Louisiana at Lafayette - Bachelor of Science

CERTIFICATIONS & LANGUAGE

Declarative Visualization Techniques in Power BI with Deneb | SQL Queries | HIPAA HITECH Compliance | Bloodborne Pathogens Safety | Orientation to the Operating Room for Sales Professions

Language: Vietnamese
